

Introduction

Performance Medicine describes the integration of health optimisation and performance enhancement across high-demand human systems, but **conceptual and structural gaps** limit standardisation, evaluation, and best-practice design and delivery.

Aim: develop a conceptual framework and Operational Tools through structured multidisciplinary synthesis of scientific and applied literature

Conclusion

This work addresses an important gap by presenting a unified conceptual architecture and practical tools for **Performance Medicine**.

The **Performance Medicine Architecture**, **Operational Specification**, and **Need Assessment & Evaluation Tool** provide a framework for system design, evaluation, and governance while establishing a basis for subsequent refinement, validation, and applied testing.

Results: The Performance Medicine Architecture

Performance Medicine Integrative Framework (PMIF)

A layered conceptual framework for the integration of health and performance medicine

MEDICAL

- 1.1 Sport and Exercise Medicine
- 1.2 Lifestyle and Preventative Medicine
- 1.3 Emergency and Acute Care
- 1.4 Specialist Liaison and Referral

PSYCHOLOGICAL

- 2.1 Performance Psychology
- 2.2 Clinical Psychology and Mental Health
- 2.3 Psychological Load Management
- 2.4 Psychosocial Environment
- 2.5 Cognitive Performance
- 2.6 Welfare, Crisis and Safeguarding

ALLIED HEALTH AND SCIENTIFIC

- 3.1 Physiotherapy and Rehabilitation
- 3.2 Nutrition and Dietetics
- 3.3 Strength, Conditioning and Exercise Science
- 3.4 Sport and Exercise Physiology
- 3.5 Biomechanics and Movement Science
- 3.6 Sleep, Recovery and Load Monitoring

TECHNICAL

- 4.1 Data Systems and Performance Analytics
- 4.2 Performance Testing and Assessment
- 4.3 Technology and Digital Integration
- 4.4 Research and Performance Science
- 4.5 Environment, Facility and Equipment
- 4.6 Operational Logistics and Coordination

PM-NEAT

PM Needs Evaluation & Assessment Tool
Dual-purpose: prospective needs evaluation AND
Current-state service review / gap analysis

A · Needs Evaluation & Planning

- Assesses what a setting requires to align with PMIF and PM-OpSpec
- Supports structured planning and service scoping
- Identifies required capabilities, adaptations, and resources

B · Service Review & Improvement

- Assesses how well current provision aligns with PMIF and PM-OpSpec
- Identifies gaps, risks, strengths, and improvement priorities
- Supports benchmarking, assurance, and quality improvement

Needs Assessment · Evaluation · Quality Improvement

PM-OpSpec

PM Operational Specification

Specifies what a PM system should be for a given setting:
Requirements · Roles · Governance · Resources

- Translates PMIF into context-specific operational requirements
- Defines minimum standards and context-specific adaptations
- Clarifies roles, remit, responsibilities, and jurisdiction
- Specifies resources, governance, and evaluation expectations
- Supports service design, commissioning, and planning

Key sub-components

Purpose & scope	Population / user group	Domain coverage
Team structure	Governance & accountability	Information systems
Decision-making pathways	Evaluation expectations	Required resources

Specification · Commissioning · Resource Management
